

Question 1

Multiply two floating point numbers. If the result is an integer, return the sum of those two floats. Otherwise return their product. In both cases, round to 2 decimal places.

Input:

First line of input is the number of the test cases. For each test case there is a line with two floats, separated by spaces.

Example input:

```
4
2.1 3.2
4.5 10.0
3.0 6.0
1.2 22.5
```

Output:

For each test case you need to output a line with the result.

Example output:

```
6.72
14.5
9.0
23.7
```
